

Project description

The project is aiming to develop real access to advanced research capacity. It is a very specific example of e-Infrastructure for Cultural Heritage, which aims to exploit top specialized infrastructure to the development of new cultural and educational services, and to establish a joint experiments of research priorities with universities, stakeholders, curators, supervisors, authorities from cultural heritage sector for research practice implementation to educational practice for vocational professions.

Phase One

This first phase has two stages and will run for 6 months. The first stage will run for the first 4 months of the project and in its second part of it, when the instrumentation structure and justification are decided, a testing infrastructure will be done. For time saving and rational use of the human resources, once the infrastructure structure is selected, the second stage relating elaboration of the tutorials and support documents will start.

Announcement

We'd like to remember everybody the upcoming two major events we are organizing this autumn in Bucharest. On 5th-7th September, "DeSE12 - Fifth International Conference on Developments in eSystems Engineering" and on 29th-30th October 2012 the "Third Balkan Symposium on Archaeometry".

Phase 1 Project Timeline

Stage 1

- infrastructure testing
- structure justification

Stage 2

- tutorials
- support documents

Expected results

- partnerships
- website
- innovation patent
- scientific papers
- reports
